

LegalCore West Africa

Build Report - what shipped, what it took, what runs it

Prepared for Victor - 8 September 2026 - All figures computed live from the repo

Yellow marker = key item v = filter column (Excel-style)

Snapshot - live today

Bottom line: Liberia runs a complete legal-intelligence product today - searchable library, per-country AI in 3 languages, certificates on every law, QR/barcode + PDF export, live ECOWAS map. Eleven further ECOWAS areas ride the same engine and open as each corpus clears review.

1 - SCOPE

What shipped (all live)

# ▼			
1	/	ECOWAS home + live flag map	LIVE
2	/search	Full-text search, filters, sort	LIVE
3	/ai	Per-country AI, voice, citations	LIVE
4	/document/:id	Full text + certificate + QR/barcode + PDF	LIVE
5	/browse	12 topics, tier totals	LIVE
6	/map	ECOWAS flags + 32 Liberia court sites	LIVE
7	/compare	Liberia vs ECOWAS/OHADA packs	LIVE
8	/saved	Saved library + brief builder + print	LIVE
9	/methodology	Trust: badges, sources, corrections	LIVE
10	/about	About AmaraTech	LIVE
11	/home	Liberia library home	LIVE
12	/west-africa	ECOWAS programme + chooser	LIVE

v filter-style headers - yellow = flagship surfaces - links open the live app.

2 - EFFORT

Calendar, pace and checkpoints

Window: 26 Mar to 8 Sep 2026 (166 days / ~24 weeks). Reported pace: +/-4 hrs/day. Estimated capacity approx 470 dev-hours (4 h x 5 days x 23.7 wks - estimate, labelled as such). Day-to-day construction happened in live working sessions; git commits below are the release checkpoints.

Checkpoint v ▼		
2026-03-26	1	Project start (first commit)
2026-08-06	4	Mid-build checkpoint batch
2026-09-02	3	Pre-release checkpoint batch

Real git history - 8 commits across 3 active days.

Build order (sequence, not to time scale)

1. Shell & theme	2. Liberia library	3. AI engine	4. Trust badges	5. Voice i18n	6. ECOWAS map	7. QR / PDF export
------------------	--------------------	--------------	-----------------	---------------	---------------	--------------------

Every block above is live in this build. Yellow = hardest technical lifts.

3 - STACK

Tools and technologies (exact versions)

Layer v ▼			
UI	React + ReactDOM	19.2.4	App interface

Build	Vite	8.0.1	Dev server + production build
Language	TypeScript	5.9.3	Type-safe code (strict)
Routing	react-router-dom	7.13.2	12 routes, SPA navigation
Maps	MapLibre GL	6.8.0	ECOWAS flag map (lazy chunk)
Maps	Leaflet + react-leaflet	1.9.4 / 5.0.0	Liberia court map
AI search	In-house WebEngine	v1.0	On-device BM25 index, per-country
Export	jsPDF / qrcode / jsbarcode	4.2.1 / 1.5.4 / 3.12.3	PDF + QR + barcode (lazy)
Icons	lucide-react	1.7.0	Icon set
Runtime	Node.js + npm	24.13.1	Build & tooling
Docs tool	Python + fpdf2	3.14 / 2.8.8	This report generator
History	git	-	8 checkpoints, this report cites them

Yellow = load-bearing core. Map + PDF libs lazy-load so first paint stays fast.

4 - DATA

Library composition (computed just now)

Instruments by topic (total 592: 584 LR + 8 ECOWAS)

Tallest bar yellow-marked. Counts read straight from the shipped database.

Badge v		
Certified	44	Hand-checked verbatim text
Verified	8	Official treaty depositories
Reference	540	Marked orientation entries

Every law carries one of these three badges in the app.

County v

Montserrado	17	#####
Bong	2	##
Grand Bassa	2	##
Maryland	2	##
Nimba	1	#
Margibi	1	#
Grand Cape Mount	1	#
Lofa	1	#
Sinoe	1	#
River Gee	1	#
Grand Kru	1	#
Rivercess	1	#
Gbarpolu	1	#

32 sites across 13 counties. # = one site.

5 - NEXT

What opens the remaining 11 areas

1. Sierra Leone corpus clears legal review - goes live instantly (engine already trained for it).
2. Ghana, Gambia, Nigeria follow the same gate - no code changes needed.
3. Francophone + Lusophone corpora unlock the OHADA layer already in the app.
4. Rule: no area goes live before its corpus clears review. The app says so on every queued page.

Boss note: everything in this report is verifiable - re-run report-stats + this script any day and the numbers refresh themselves.
